Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. A central nervous system modulator a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperrisent brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, objection of fracture, trauma, atopic dermattitis, osteoprosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The agents for promoting prolactin secretion can be used for treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, became in the contraceptive of the contraceptive of
                                                            of a fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a rat type ligand fragment. is used in the course of the invention. The specification de an agent for modulating prolactin secretion which comprises an agent for modulating prolactin secretion which comprises iligand polypeptide or a salt, for a G protein-coupled recept
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of G protein-coupled receptor ligands - for modulating pr
secretion or placental function, e.g. for treating menopausal

A method suitable for commercial high-level production of 19P2L commprises expressing the ligand in host cells as a recombinant fusion protein e.g. with human basic fibroblast growth factor (see AAV83794-95) that has been modified to include an N-terminal cysteine residue. The ligand is released from the fusion by cysnylation followed by ammonolysis. 19P2L has prolactin secretion-stimulating and (at high doses) prolactin secretion-inhibiting properties. It can be used in the treatment and prevention of various diseases including:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pituitary-derived ligand polypeptide; G-protein coupled orphan receptor; GPR10; UHR-1; modulator; pituitary; central nervous system; pancreas;
                                                                                                                                                                                                                                                                                                                                     WO9849295-A1

                                                                                                                                                                               CC a vector containing the ligand polypeptide encoding DNA are used to CC produce a recombinant ligand polypeptide. The ligand polypeptide, and its CC produce a recombinant ligand polypeptide. The ligand polypeptide, and its CC pancreas and other tissues and can be used to screen for agents that CC modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, e.g. to treat senile dementia; Alzheimer's, CC parkinson's or Huntington's diseases; Creutzfeld-Jakob disease; poisoning CC by heavy metals or drugs; diabetes; schizophrenia; disorders of growth CC contens secretion; cancer; rheumatoid arthritis, epilepsy and many CC vasopressor. Transgenic animals carrying the ligand polypeptide encoding CC vasopressor. Transgenic animals carrying the ligand polypeptide encoding CC content in the ligand polypeptide DNA or its mutein are used to study the function of the polypeptide of cell lines. The ligand polypeptide DNA is used as a source of probes CC and primers; to identify related sequences; in receptor-binding assays; CC and to develop transgenic animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementis; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; critzophrenia; disorders of growth hormone secretion; cancer; CC remainatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC related sequences; in receptor-binding assays; for production of Ab and CC antisers; in drug development; for gene therapy and to develop control of the propersion of anti-ligand polypeptide control of antisers; to identify control of the propersion of the propersion of anti-ligand polypeptide control of antisers; to develop the process and primers; to identify control of the process and primers; to identify control of the propersion of the propersion of anti-ligand polypeptide control of the propersion of the propersion of the propersion of the polypeptide control of the propersion of the propersion of the propersion of the propersi

       Identifying modulators of body weight by a combination of a cell-free or cell-based assay to identify modulators of GPR10, followed by an vivo assay for the compounds effect on e.g. feeding behavior - \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, tertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary

The method comprises cell-free and/or cell-based assays that identify compounds which bind to and/or activate or inhibit the activity of GPRIO, a G protein-coupled receptor. These assays are then followed by an in vivo assay of the effect of the compound on feeding behaviour, body weight or metabolic rate in a mammal. Prolactin-releasing peptide (PTRP, AN80704) is a ligand of GPRIO. Binding of PTRP to GPRIO stimulates a signal transduction cascade, which results in an increase in food intake. Compounds identified using the method of the invention are useful for the modulation of body weight. Antagonists of GPRIO can be used to treat obesity, while GPRIO agonists can be used to treat sequence represents rat PTRP.
The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative

                                                                                                       The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G proteir receptor ligand. This can be used to control the secretion of CRH and is useful as an analysis or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrencorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                                                                                                                                 reactive group (II) (e.g. succinimidy) and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases and specificity as bonding to large molecules decreases. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.

                                                                                                                                                                        hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                               This sequence represents a peptide fragment from a novel rat type ligand polypeptide corresponding to amino acid residues 22 to 53 of the sequence represented in AAW31383 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper and polyphagia, hyperlipidaemia. hypercholesterolaemia, hyperrideemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    G protein-coupled receptor; ligand binding; modulator; pituitary; central nervous system

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and plg. This sequence represents a rat peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc ligand polypeptide corresponding to amino acid residues 22 to 54 of the csequence represented in AAN31383 and is used in an assay to monitor cliqued binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. A central nervous system modulator a pancreatic function commodulator. This ligand could have specific applications as a protein coupled coupled to specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic grouphylactic or therapeutic agent for dementia, depression, hyperkinetic consciousness, anxiety syndrome, schizophrenia, cc trauma, growth hormone secretory disease, hyper-and polyphagia, thyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, polyphagia, cc hyperlipidaemia, diabetes, cancer, pancreatitis, renal disease, cc hyperinglactinaemia, diabetes, cancer, pancreatitis, renal disease, cc Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, cause myocardial infarction, infertility, spinocerebellar degeneration, composiaent brain ischaemia, epilepsy, amylotrophic lateral sclerosis, cancer pancreatitis. Assays can also be developed to screen compounds which are confluented to screen compounds which are continued to be activity of the ligand affecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

```
protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
```

Disclosure; Page 58; 72pp; Japanese.

This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after explision of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a rat peptide which acts as an oxytocin secretic promoter acts as an oxytocin secretion

ilgand polypeptide corresponding to amino acid residues 22 to 52 of the CC sequence represented in AAW31383 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic cc syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperdyceridaemia, hypercholesterolaemia, hyperdyceridaemia, hypercholesterolaemia, hyperdyceridaemia, cc hyperpolactinaemia, cancer, pancreatitis, renal disease, hyper-solaetinaemia, hipercholesterolaemia, hyperdyceridaemia, cc trauma, solaetes, cancer, pancreatitis, renal disease, cc acute myocardial infarction, infertility, spinocerebellar degeneration, cc bone fracture, trauma, atopic dermatitis, osteoporosis and/or coligogalactia. Assays can also be developed to screen compounds which are cc capable of altering the binding activity of the ligand affecting cc activation of the G protein-coupled receptor protein.

> CC protein-coupled receptor ligand 19p1. A method suitable for the ligand in host cells as a recombinant fusion protein of the human pituitary G thuman basic fibroblast growth factor (see AAV83796-97) that has been modified to include an N-terminal cysteline residue. The coupled from the fusion by cysteline residue. The coupled from the fusion by cysteline residue. The coupled in the treatment and prevention of various diseases include an N-terminal cysteline residue. The coupled in the treatment and prevention of various diseases probably and clat coupled from the fusion by cysteline residue. The coupled sease, plok's disease, that has protactin secretion-inhibition followed by with: genealogical discorders (e.g. Alzheimer's diseases including: ce.g. creative residue and prevention of various diseases including: ce.g. creative residue and prevention of various diseases including: components; de.g. hypothyroidism, vitamental, and dementia associated consciousness. It is also metal and ortamin BJ deficiency, alcoholism, considered with protactin for metabolic disease or subarachnoidal heamorrhage, and other types of dementia, alcoholism, considered with protactin hypotantic compounds), tumorisenic consectives child syndrome (microencephalopathy) and disturbance of (hypersective) disease; in the protactin hypotantin protention and isturbance of consciousness. It is also microencephalopathy) and disturbance of consectives; including: hyperprotactinemia, pituitary adenoma, consequent for study of the protactin hypotande and autoimmune disease of actogogue in mammalian farm animals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC This represents the matured murine pituitary-derived ligand polypeptide CC sequence. The polypeptide is a ligand for the G-protein coupled orphan CC receptor designated GPR10 (human) or UHR-1 (rat). Cells transformed with CC a vector containing the ligand polypeptide encoding DNA are used to CC fragments, modulate function of the pituitary, central nervous system, CC pancreas and other tissues and can be used to screen for agents that CC modulate binding of the polypeptide to the receptor; to quantify the CC amount of receptor in a sample and to raise antibodies. They may also be used the therapeutically, e.g. to treat senile dementia; Alzheimer's, CC parkinson's or Huntington's disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; dlabetes; schizophrenia; disorders of growth CC by heavy metals or drugs; dlabetes; schizophrenia; disorders of growth CC others, also to improve post-operative nutritional status and as conversion; cancer; rheumatoid arthritis, epilepsy and many CC vasopressor. Transgentc animals carrying the ligand polypeptide encoding CDNA or its muteln are used to study the function of the polypeptide-confection of Ab and antisera; in drug development; for gene therapy can develop transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide = The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld Jakob disease; poisoning by heavy metals or drugs; CC diseases; creitzphrenia; disorders of growth hormone secretion; cancer: CC remanatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide DNA is used as a source of probes and primers; to identify CC related sequences; in receptor-binding assays; for production of Ab and CC antisers; in drug development; for gene therapy and to develop centify cantilogenic animals. Sequences AAW95174 to AAW95178 represent antigenic animals.

It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Physiologically-active polypeptide recognized as ligand by protein-coupled receptor protein, for promoting secretion as drugs for diseases relating to oxytocin secretion and in

```

The invention relates to a method for identifying compounds useful for modulating body weight. The method comprises cell-free and/or cell-based assays that identify compounds which bind to and/or activate or inhibit the activity of GPR10, a G protein-coupled receptor. These assays are then followed by an in vivo assay of the effect of the compound on feeding behaviour, body weight or metabolic rate in a mammal. Prolactin-releasing peptide (PRRP; AAY87504) is a ligand of GPR10. Binding of PRRP

                                                                     The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences ANY49290-302 represent peptide fragments of the 19P2 ligand.

Compounds identified using the method of the nare useful for the modulation of body weight. Antagonists of n be used to treat obesity, while GPRIO agonists can be used to creat sequence represents rat PrRP.

                                                                                                                                                                     The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central mervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 1992 ligand.
                                                                                                                                                                                                                                                                                                                               Disclosure; Page 26;

analgesic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypodarenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

```

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. A. Geneseq\_uszbuz:\*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC ligand polypeptide corresponding to amino acid residues 23 to 53 of the CS sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator. A central nervous system modulator or a pancreatic function CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic Syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, prophylactic agent for dementia, depression, hypercholesterolactinaemia, hypercholesterolacmia, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolacmia, hyper- and polyphagia, CC transient brain ischaemia, cancer, pancreatitis, renal disease, CC acute myocardial infarction, infertility, spinocerebellar degeneration, cC cligogalactia, Assays can also be developed to screen compounds which are cc activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a human type ligand fragment. It colored in the course of the invention. The specification describes of ligand polypeptide or a salt, for a grotein which comprises a comprise a salt, for a grotein-coupled receptor (GPCR) or a salt, for a grotein-coupled receptor (GPCR) or a service of the secretion which comprises a comprise of the secretion of the secretion productin secretion can be used for comprise of the secretion of the secretion of the secretion can be used for light the secretion of the secretion can be used for promoting comply the secretion can be used for promoting comply the secretion can be used for treating or preventing comply the secretion can be used for treating or preventing comply the secretion can be used for treating or preventing complete the syndrome, amenorate a salt to syndrome, complete the syndrome, amenorate a salt to syndrome, complete the syndrome, sheehan syndrome of disease. The inhibitory agents can also be used as contraceptives. The agents for construction can be used for treating or preventing complete syndrome, whether the syndrome and the secretion syndrome, amenorate and the secretion syndrome. The agents for construction can be used for treating or preventing the secretion syndrome and the secretion syndrome, and the secretion syndrome and the secretion syndrome. The agents for construction can be used for treating or preventing the secretion syndrome, and the secretion syndrome and the secretion can be used for treating or preventing the secretion syndrome and the secretion can be used for treating or preventing the secretion syndrome and the secretion can be used for treating or preventing the secretion syndrome.
Claim 5, Page 35, 56pp, English
                   Producing a 19P2 pituitary G protein receptor ligand of a fusion protein, useful for preventing and treating breast cancer, renal failure and autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ammonolysis. 19721 has prolactin secretion-stimulating and (at Chief high doses) prolactin secretion-inhibiting properties. It can be cused in the treatment and prevention of various diseases including: senile dementia, cerebrovascular dementia, and dementia associated with: genealogical disorders (e.g. Alzheimer's disease, Parkinson's cidsease, Pick's disease, Huntington's disease), infectious diseases (e.g. Alzheimer's disease), Parkinson's cidsease, Pick's disease, Huntington's disease), Infectious diseases (e.g. Alzheimer's disease), Parkinson's cidseases (e.g. Parkinson's disease), Infectious diseases (e.g. Alzheimer's disease or toxicosis (e.g. hypothyroidism, vitamin Bl2 deficiency, alcoholism, cidseases (e.g. brain tumour), traumatic diseases (e.g. chronic intoxication by drugs, metal and organic compounds), tumourigenic cidseases (e.g. brain tumour), traumatic diseases (e.g. chronic subarachnoidal heamorrhage, and other types of dementia, depression, hyperarctive child syndrome (microencephalopathy) and disturbance of consciousness. It is also useful for prevention and treatment of disease associated with prolactin hypo and hypersecretion crespectively, including: hyperprolactinaemia, pituitary adenoma, consectively, including: hyperprolactinaemia, pituitary adenoma, consectively, including: hyperprolactinaemia, pituitary adenoma, consectively, including: hyperprolactinaemia, pituitary adenoma, consecutively, including: hyperprolactinaemia, pituitary adenoma, including: hyperprolactinaemia, pituitary adenoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

A method suitable for commercial high-level production of 19P2L comprises expressing the ligand in host cells as a recombinant fusion protein e.g. where the ligand in host cells as a recombinant fusion protein e.g. where the ligand is released from the fusion by cyanylation followed by ligand is released from the fusion by cyanylation followed by the fusion by cyanylation fusion by cyanylation followed by the fusion by cyanylat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for amellorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atomic bleeding, before and after expulsion of placent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                            Disclosure;

                                                                                                                                                   The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                                                                  The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases.

Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. This ligand could have specific applications as a modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, byperilpidaemia, hypercholesterolaemia, hyperclactinaemia, hypercholesterolaemia, hyperclactinaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting

                                                                                                                                                                                                                                                                                                                              This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, tertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary

This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

```
modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyper-glyceridaemia, hypercholesterolaemia, hyper-glyceridaemia, hyper-glyceridaemia, hyper-glyceridaemia, hyper-glyceridaemia, hyper-glyceridaemia, hyper-glyceridaemia, hyper-glyceridaemia, hyper-glyceridaemia, planal injury, hyper-glyceridaemia, spinal injury, hyper-glyceridaemia, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                              This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 23 to 55 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ligand peptide for G protein-coupled receptor - acts by modulating function in the central nervous system, pancreas and pituitary gland

    corticotrophin releasing hormone (CRH), involving the use of a G prote receptor ligand. This can be used to control the secretion of CRH and useful as an analysic or for treating, preventing or analysis of the secretion of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion

    This sequence represents a novel human type ligand polypeptide encoded by pHOB7 which is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pitultary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper-and polyphagia, hypercholesterolaemia, hyperlipidaemia, hyperphagia, hyperpolactinaemia, diabetes, cancer, pancreaticis, renal disease, Turner's syndrome, neurosis, amylotrophic lateral sclerosis, acute myocardial infarction, amylotrophic lateral sclerosis, acute myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodistac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, amenorahea, galactorrhea, acromesaly chiari-Frommel syndrome, Argonz-de castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               menopausal syndrome; euthyroid; hypometabolism; lactation; modulation; pituitary adenomatosis; brain tumour; emmenlopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhae; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; chorlocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia; prolactin secretion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G protein-coupled receptor; GPCR; hypocovarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; modulation;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a contral nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a ccomposition of the syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, cc hyperrolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatold arthritis, spinal injury, CC acute myocardial infarction, infertility, spinacerebellar degeneration, CC consciousness, anxiety syndrome, schizophrenia, CC conference, representation, infertility, spinacerebellar degeneration, CC conference, reacute, remain ischaemia, epilepsy, amylotrophic lateral sclerosis, concertion, infertility, spinacerebellar degeneration, CC consciousness, anxiety syndromes, and/or copable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a human type ligand fragment. It
is used in the course of the invention. The specification describes
an agent for modulating prolactin secretion which comprises a
ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)
protein. The agents for promoting prolactin secretion can be used for
treating or preventing hypocovarianism, genecyst cacogenesis, menopausal
syndrome, enthyroid or hypometabolism. They can by used for promoting
lactation in a domestic mammal and as an aphrodisiac. The agents for
inhibiting prolactin secretion can be used for treating or preventing
pitulitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,
prolactinomma, infertility, impotence, amenorrhea, galactorrhea,
acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,
Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia.
The inhibitory agents can also be used as contraceptives. The agents for
modulating placental function can be used for treating or preventing
chorical saccharmetabolism absorbation mole, abortion, unthrifty fetus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion promoter.
The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pliuitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences ANY49290-302 represent peptide fragments of the 1992 ligand.

                                                                                                                            The present sequence describes a method of controlling the secretion of corticotrophin releasing hormone (CRH), involving the use of a G protein receptor ligand. This can be used to control the secretion of CRH and is useful as an analyesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                    밁
                                                                                                                                                                                                                                                         The present invention describes a modified therapeutic peptide (I) CC comprising a therapeutically active amino acid region (III) and a CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to CC a less therapeutically active amino acid region (IV), which covalently CC bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth CC factors and neurotransmitters, to protect them from peptidase activity CC in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. CC Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases contracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the creaters.

ligand polypeptide corresponding to amino acid residues 34 to 54 of the CC sequence represented in ANAJ1390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a modulator or a pancreatic function CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic cy syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper-lapidaemia, hypercholesterolaemia, byperglyveridaemia, for hyperilapidaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, translent brain ischaemia, epilepsy, amylotrophic lateral sclerosis, concer, brain ischaemia, epilepsy, amylotrophic lateral sclerosis, concer, pancreatitity, spinal disease, coligogalactia, Assays can also be developed to screen compounds which are CC capable of altering the binding activity of the ligand affecting cactivation of the G protein-coupled receptor protein.

It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, terrine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and ply. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of as drugs for diseases relating to oxytocin secretion and in v

This can be used to control the secretion of CRH and is useful as an analyesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypeadrencorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ligand polypeptide corresponding to amino acid residues 34 to 55 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treatment; disease; pain; atonic bleeding; uterine recovery failure; caesarean section; artificial fertilization; galactostasis; goat; pig;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim
Physiologically-active polypeptide recognized as ligand by protein-coupled receptor protein, for promoting secretion of
                                                                                                                                         Matsumoto
                                                                                                                                                                                                                                                                                                     22-DEC-1999;

                                                                                                                                                                                                                                                                                    This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 as drugs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
```

The present sequence describes a method of controlling the secretion corticotrophin releasing hormone (CRH), involving the use of a G protreceptor ligand. This can be used to control the secretion of CRH and useful as an analysis or for treating, preventing or ameliorating

of CRH and is

of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
CC This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 23 to 53 of the CC sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterotry disease, hyper- and polyphagia, CC hyperlipidaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, accordination to the fracture, trauma, atopic dermatitity, spinocerebellar degeneration, CC bone fracture, trauma, atopic dermatitis, osteoporosis and/or CC capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sox
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT
     CC The present sequence represents a human type ligand fragment. It
CC is used in the course of the invention. The specification describes
CC an agent for modulating prolactin secretion which comprises a
CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)
CC protein. The agents for promoting prolactin secretion can be used for
CC treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal
CC syndrome, enthyroid or hypometabolism. They can by used for promoting
CC lactation in a domestic mammal and as an aphrodisiac. The agents for
CC inhibiting prolactin secretion can be used for treating or preventing
CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,
CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,
CC cormegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,
CC prolactinoma, infertility syndrome, Argonz-del Castilo syndrome,
CC prolactinoma syndrome, lymphoma, Sheehan syndrome or dyszoospermia.
CC The inhibitory agents can also be used as contraceptives. The agents for
CC modulating placental function can be used for treating or preventing
CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SOX
     CC Phis is the amino acid sequence of the human pituitary GC protein-coupled receptor ligand 19P2L. A method suitable for CC commercial high-level production of 19P2L comprises expressing CC the ligand in host cells as a recombinant fusion protein e.g. with CC human basic fibroblast growth factor (see AAV83796-97) that has CC been modified to include an N-terminal cysteine residue. The CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released from the fusion by cyanylation followed by CC ligand is released, POLA fusion for various diseases including: Senile dementia, Gerebrovascular dementia, and dementia associated CC with: genealogical disorders (e.g. Alzheimer's disease), infectious diseases (e.g. Creutzfeldt-Jakob's), endocrine or metabolic disease or CC disease, Pick's disease, metal and organic compounds), tumourigenic CC diseases (e.g. branin tumour), traumatic diseases (e.g. chronic consciousness (e.g. branin tumour), traumatic diseases (e.g. chronic consciousness. It is also useful for prevention and treatment of CC diseases associated with prolactin hypo and hypersecretion consecuted with prolactin hypo and hypersecretion discretion discreters, indepthal ves(cle bronnics).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
